EXPERIENCE

Full Stack Developer

Sehtana

04/2026 – 09/2026 Doha, Qatar

- Developed and maintained full-stack features across three application types: consumer mobile applications, patient-facing kiosks, and a PC-based clinical system supporting healthcare workflows, reporting, and executive analytics
- Developed an Indoor Navigation Map prototype to support navigation within healthcare facilities
- Implemented Doctor and Kiosk assignment functionality to support clinical workflow management
- Developed features for an Executive and Analytics Dashboard to visualize operational and healthcare-related data
- Implemented reliability fixes across mobile and kiosk applications, resolving issues affecting core user workflows
- Technologies used:** Flutter, Dart, React, JavaScript, Node.js, Express.js, REST APIs, Git/GitHub, Visual Studio Code, Android Studio

Software Quality Assurance

Edgage

11/2025 – 03/2026 Doha, Qatar

- Executed an average of 25 test cases and 15 bug retests per workday across functional, regression, and compatibility testing
- Identified, documented, and tracked defects with clear reproduction steps, collaborating with developers to reproduce issues and validate fixes
- Developed 9 automated Playwright test scripts using JavaScript and Cucumber to support regression testing of core user workflows
- Reviewed project requirements and technical specifications to assess usability, testability, and potential edge cases
- Created and maintained test cases, checklists, and QA documentation to support comprehensive test coverage and consistent testing processes
- Technologies used:** Google Sheets, GitHub, Playwright, Cucumber, Visual Studio Code, JavaScript, Node.js

Unreal Engine Developer

Monet

05/2025 – 08/2025 Doha, Qatar

- Built and optimized features in Unreal Engine to support interactive planning and visualization in 3D venue environments
- Implemented multiplayer collaboration tools, enabling real-time asset placement and interaction among multiple users
- Integrated an AI-assisted workflow that enhanced efficiency in creating 3D assets from reference materials
- Designed and maintained RESTful APIs on the backend to ensure smooth communication between the 3D application and server
- Improved system usability and performance by refining workflows and supporting cross-functional development efforts
- Technologies used:** Diversion, Unreal Engine 5, JavaScript, Next.js, GitHub, Firebase, REST API, Visual Studio Code

SKILLS

Languages

Python JavaScript Dart
HTML CSS SQL ActionScript

Frontend / Mobile

React Flutter React Native
Vite Electron

Backend

Node.js Express.js FastAPI
Flask Next.js
REST API Development

Databases

MySQL MariaDB MongoDB
Firebase SQLAlchemy

Testing & Automation

Playwright Cucumber

Tools

Git GitHub Postman
Figma VS Code Visual Studio 2022

Other

Unreal Engine 5 JPEXS Free Flash Decompiler

EDUCATION

Bachelor of Science in Information Systems

University of Doha for Science and Technology

09/2020 – 08/2025 Doha, Qatar

PROJECTS

Sifu: Moveset Maker

Modding Tool & Moveset Editor

📅 03/2026 – Present 📍 Doha, Qatar

- Developed a standalone desktop tool for creating, editing, previewing, and exporting custom Sifu combat movesets without requiring the Unreal Engine editor.
- Built an interactive combo-tree editor with animation previewing, drag-and-drop move replacement, search/filtering, and vanilla-vs-custom animation comparison.
- Implemented an automated Unreal Engine asset processing and mod export pipeline to selectively extract required game assets, modify movement and animation data, and package customized movesets into installable .pak mods.
- **Technologies used:** C#, .NET 10, Unreal Engine 4, UnrealPak, WebView2, Git/GitHub

Stick War 2: Enhanced Edition Mod

Campaign & Gameplay Overhaul

📅 03/2026 – Present 📍 Doha, Qatar

- Developed a large-scale campaign and gameplay overhaul introducing custom missions, boss encounters, abilities, summons, difficulty scaling, and new gameplay systems.
- Implemented custom enemy behaviors, timed survival waves, fog-of-war mechanics, unit transformations, level events, and player-side automation across campaign scenarios.
- Optimized legacy game systems by reducing repeated AI target scans, unnecessary UI updates, and recurring command processing, while debugging campaign progression, boss encounters, and gameplay edge cases.
- **Technologies used:** ActionScript 3, Adobe Flash Player, JPEXS Free Flash Decompiler, Visual Studio Code, GitHub
